Author

My name is **Siphehile Sibiya**, and today I will be presenting my **Coffee Shop Sales Dashboard**. The purpose of this dashboard is to analyze coffee shop sales performance by identifying sales trends, customer purchasing patterns, product performance, and store performance. The dashboard was created using **SQL for data preparation** and **Power BI for data visualization**.

The dashboard helps managers make better business decisions by providing insights into revenue, sales quantity, peak business hours, and best-selling products.

Introduction

Four key cards anchor the dashboard's top-line story

Total Revenue Card

\$698K

Total revenue generated from all coffee shop sales. Helps measure overall business performance.

Total Transactions Card

141,116

Total number of transactions completed — how many purchases customers made in the period.

Total Quantity Sold Card

214K

Total number of products sold, helping understand customer demand.

Average Sale Card

\$3.38

Average amount spent per transaction, evaluating customer spending behavior.

Revenue by Transaction Hour

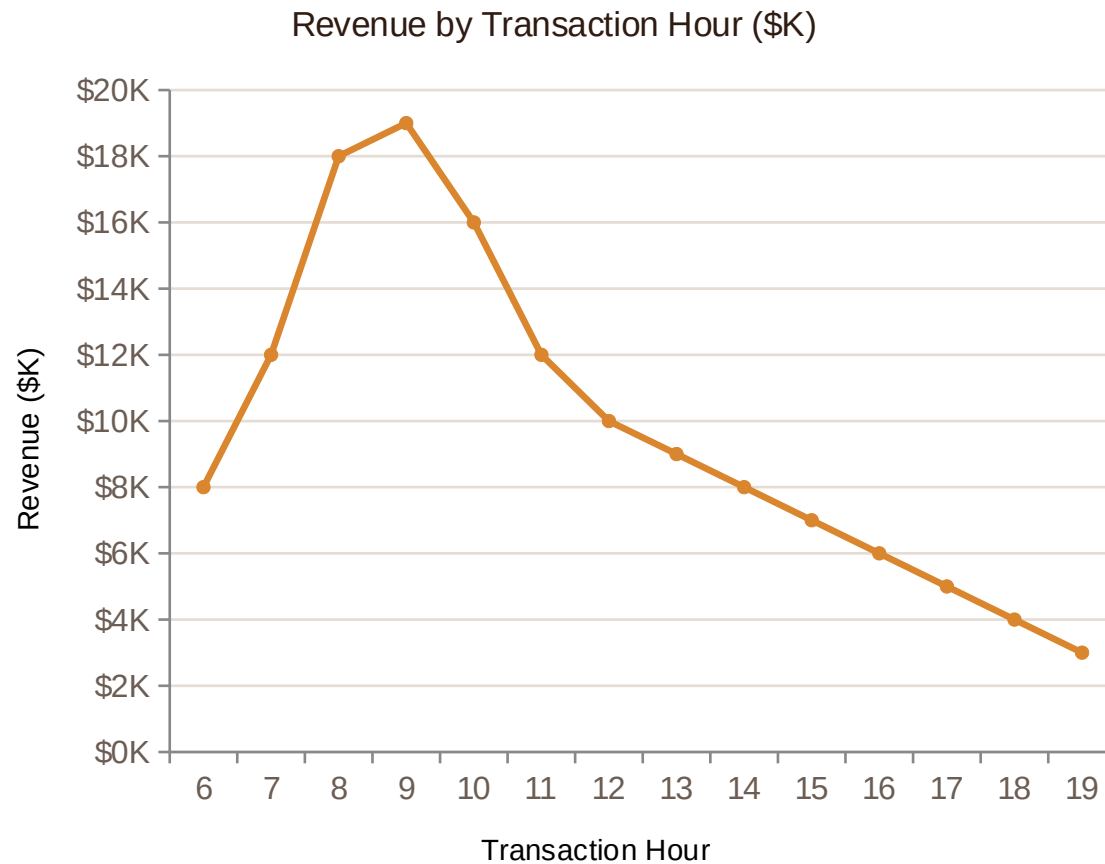

INSIGHTS

- Customer purchases peak during certain hours (8 to 10 am).

RECOMMENDATIONS

- Schedule more staff during peak hours.
- Introduce promotions during quieter hours to attract customers.

Sales by Month

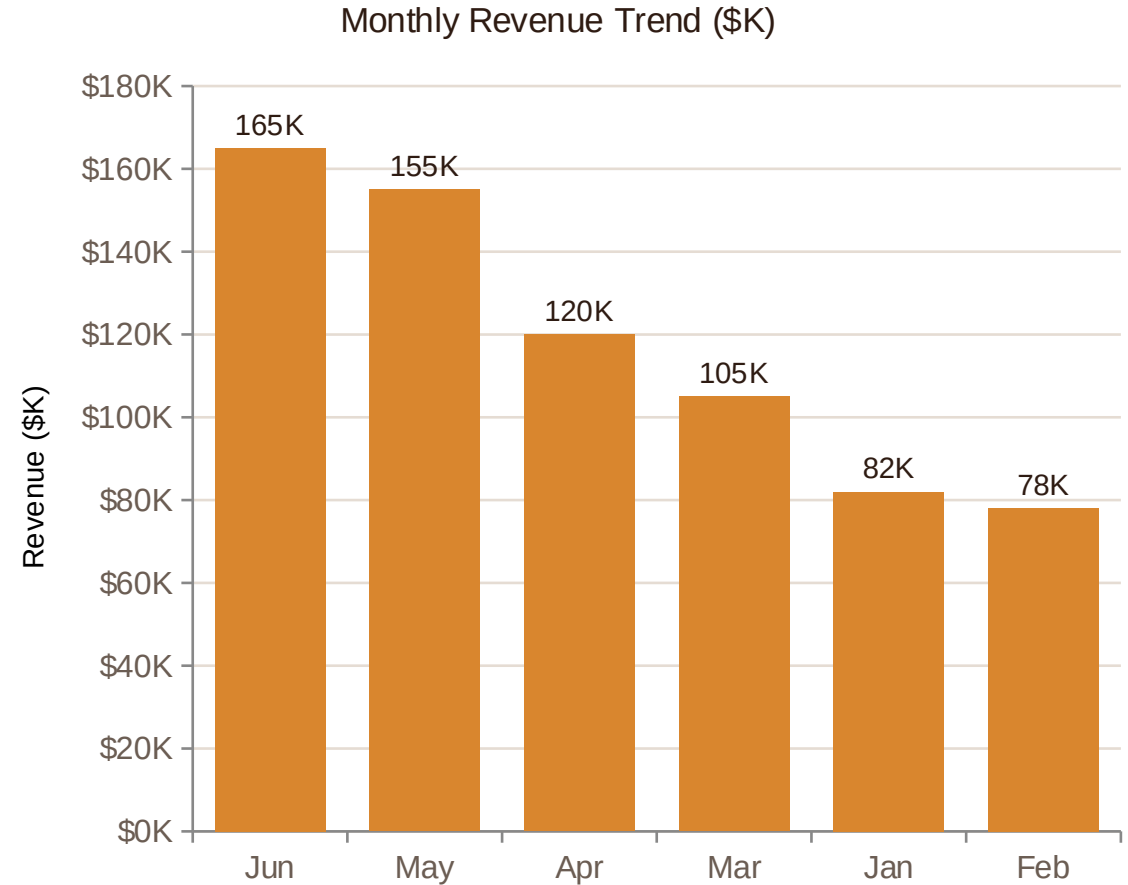

INSIGHTS

- Sales fluctuate from month to month.
- Some months consistently perform better than others.

RECOMMENDATIONS

- Prepare for high-demand months with extra stock.
- Run seasonal promotions during low-performing months.

Revenue by Product Type

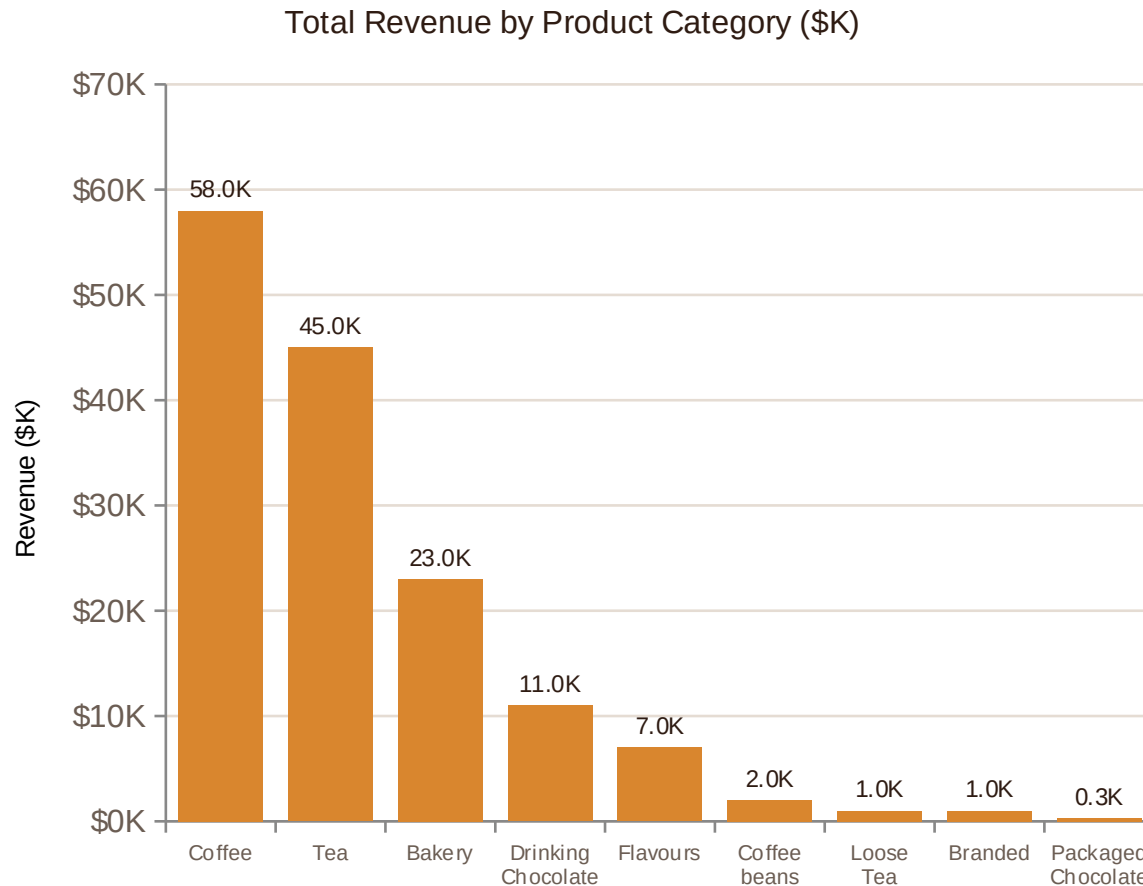

INSIGHTS

- Certain product types such as coffee, tea and bakery are purchased more frequently.
- Best-selling products contribute the largest share of revenue.

RECOMMENDATIONS

- Maintain sufficient stock of best-selling products.
- Review pricing and marketing for low-selling products.

Sales By Time Bucket

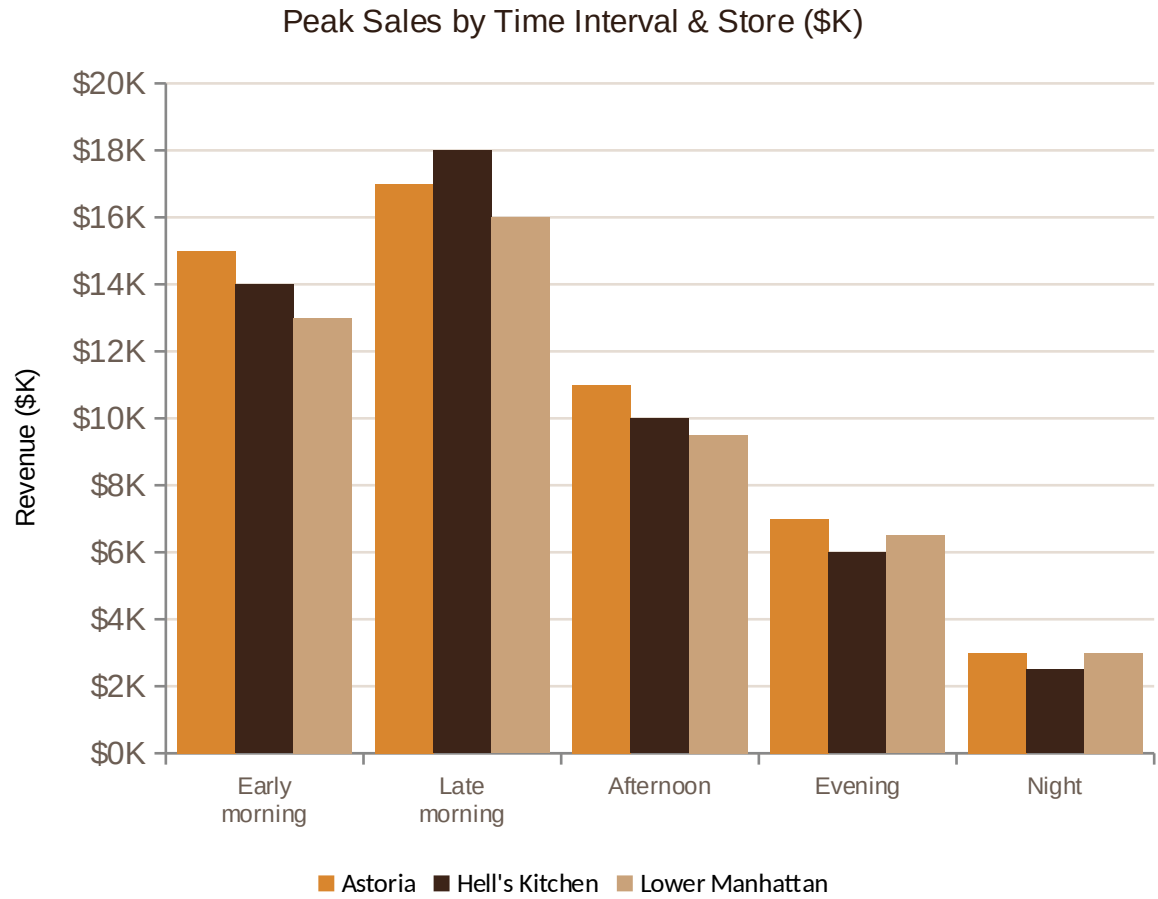

INSIGHTS

- Most sales occur within specific time buckets.
- Some periods experience significantly lower customer activity.

RECOMMENDATIONS

- Ensure enough inventory during busy periods (early and late morning).
- Offer time-based discounts during slow periods.

Revenue by Store Location

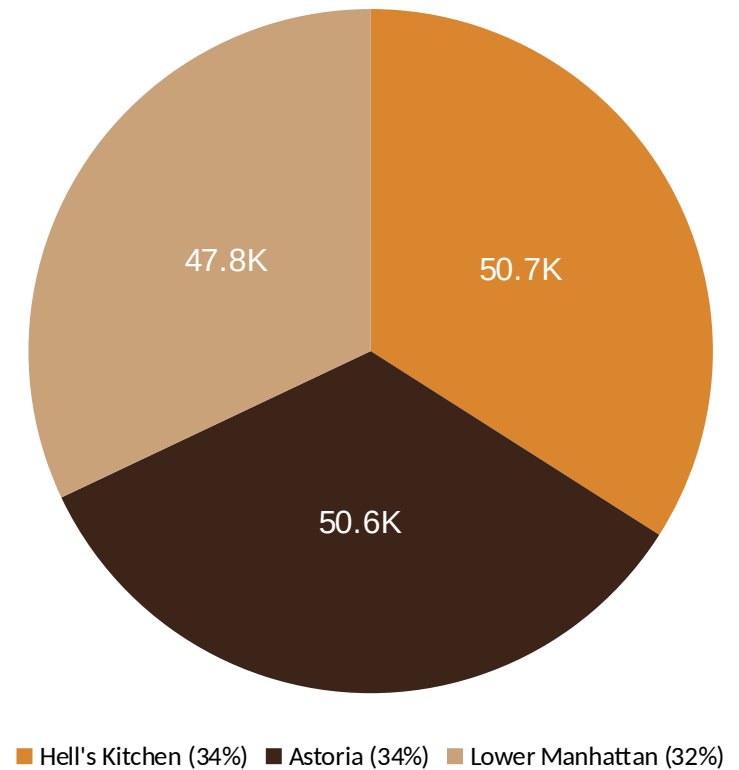

INSIGHTS

- Sales performance varies across store locations.
- Some stores consistently generate higher revenue.

RECOMMENDATIONS

- Investigate why top-performing stores perform well.
- Implement successful strategies in lower-performing stores.

Revenue by Store Location (\$K)

Sales by Day Type

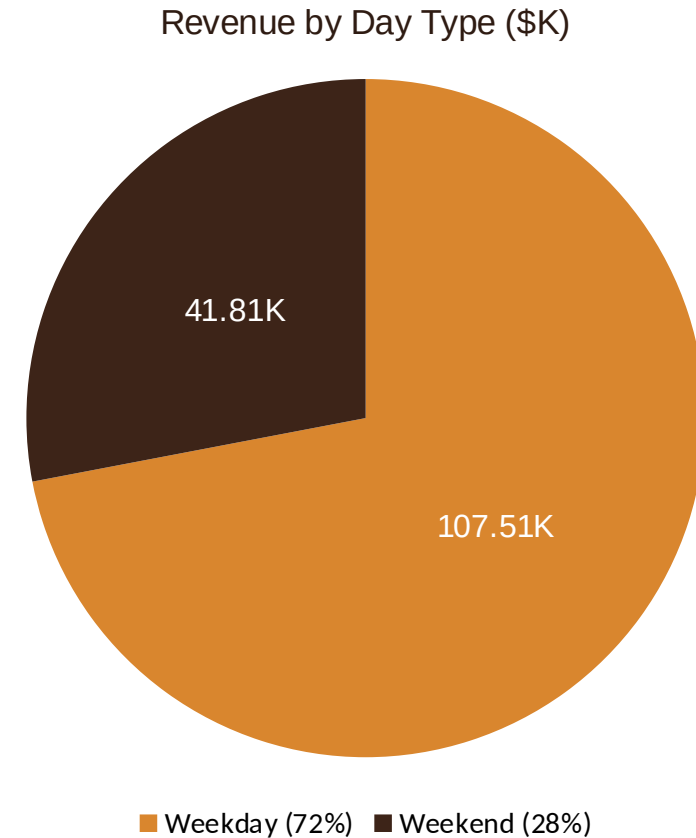

INSIGHTS

- Customer activity differs between weekdays and weekends.
- One day type contributes more revenue than the other.

RECOMMENDATIONS

- Increase staffing during the busier day type.
- Create promotions to boost sales during quieter days.

Conclusion

INSIGHT

The dashboard provides a clear overview of coffee shop performance by highlighting revenue trends, customer purchasing behavior, top-selling products, busiest trading hours, and store performance.

RECOMMENDATION

Management should focus on increasing sales during quieter periods, maintaining inventory for best-selling products, allocating staff during peak hours, and using promotions to improve customer spending and overall profitability.
